

Zur Verbesserung der Sicherheit wurden die Bibliotheken von Drittanbietern so weit wie möglich aktualisiert.

Das hat zur Folge, dass auch *.js Dateien etc entfernt wurden bzw dazu gekommen sind.

Damit brauchen ein paar SysConfig-Schlüssel eine Sonderbehandlung, wenn diese angepasst wurden.

Sollten im Zuge eines Updates vermehrt AJAX-Fehler mit *.js-Meldungen auftreten, so ist dies mit ziemlich hoher Wahrscheinlichkeit darauf zurück zu führen.

Für das Update muss geprüft werden, ob einer dieser SC-Schlüssel angepasst wurde (ZZZAuto.pm)

Sollte dies der Fall sein, muss der Schlüssel zurück gesetzt und danach die manuelle Anpassung (meist zusätzliche Berechtigungsgruppe) nach gezogen werden.
